Diagnosing Injector Performance

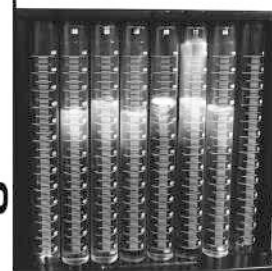

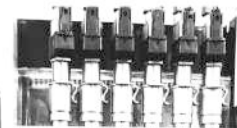

Piezo injector is the current system of choice of major executive vehicle manufacturers. Piezo injectors can respond so quickly that they can allow the vehicle to run at incredible air/fuel ratios of up to 60:1 in some engines. Compared to standard vehicles running at 14:1 air/fuel ratios, this means the minimum amount of fuel is used and the exhaust emissions are virtually non-existent, while still maintaining excellent drivability and performance. As you can imagine, the performance of these injections is critical, maintenance should **not** be an option, it should be **mandatory**.

How often do you check your Piezo injectors?

Piezo injections offer performance, driveability, economy and the ultimate in exhaust emissions.

How do

Piezo injectors?

Special Features

In conjunction with a world leading vehicle manufacturer, ASNU have created this purpose built adapter box.

- ◆ Easy to use test functions using the latest Piezo technology
- ◆ Easy connections to Classic GDi Machine or GDi adapter Box.
- ◆ Universal fittings for Piezo type injectors
- ◆ Dimensions: 300mm x 190mm x 220mm in a robust metal casing.

GDI Adapter Box

The ASNU GDI Adapter Box is designed to work with all ASNU produced machines.

The GDI systems operate in SEQUENTIAL mode; firing fuel to each injector in turn directly in to the combustion chamber, as opposed to the conventional SIMULTANEOUS mode as used in most manifold injection systems.

The ASNU GDI Adapter Box is designed to work with all currently produced injectors. As the Gasoline engine develops into the GDI production, ASNU will work to maintain the system with updates as the new systems are introduced.

To enable the user to analyse the fuel spray pattern easier and measure the fuel flow rate more accurately, the ASNU GDI Adapter Box has a specific range of settings that will enable the user to check the injectors electronic operation, clearly see the injectors spray pattern form and accurately measure the injector delivery flow rates.

GDI Adapter Box Features

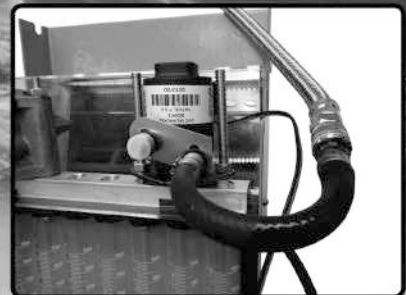

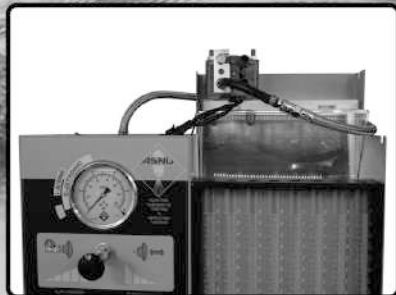

- Suitable For All Types GDI Injectors
- 18 Various M/S & RPM Test Settings
- Simulates on-car Spray Patterns & Flow Rates
- Tests Up To 8 GDI/FSI Injectors at one time
- Suitable for Standard Manifold Injectors
- Sequential Injector Firing Operation
- Single Injector Selection During Multi Injector Operation
- Injector Inductance Test - Checking Injector Electro Magnetic Circuit
- Injector Leak Down Test
- Ultrasonic Injector Cleaning Cycle
- 12 Language Selection Screen
- Easy to Read LCD Screen
- Membrane Key Pad
- Updates Old ASNU Machine To Latest Specification
- Use with Any ASNU System
- Power Supply - AC Input 90 - 264 V

2 STROKE GDI MARINE ADAPTER BOX

The 2SGDI system has been produced to drive Evinrude and Ficht Direct Injectors with an ASNU Classic GDI machine

Ficht & ETEC Injector Applications:

- Marine (Evinrude, Johnson outboards and Sea Doo jet skis)
- Snow (Ski doo, and Polaris snowmobiles)
- Land (Polaris and Bombardier ATV products)

2 Stroke GDI Box Benefits:

- Run Ficht and ETEC injectors using any ASNU Classic GDI machine / GDI Box
- Recover seized injectors.
- Clean fouled injectors
- Leak test injectors
- Dynamic flow test injectors (pulsing)
- View spray patterns

Injector Driver Technical details:

- Automatic detection of Ficht or ETEC injector connection
- High voltage drive
- Uni-directional high current drive (Ficht)
- Bi-directional high current drive (E-TEC)
- 100 – 5000 injections per minute pulsing range
- 96 – 264Vac 50/60Hz electrical supply range

ASNU GDI Extractor Tool

Part No: ASNU266EXT

The ASNU GDI Injector Extractor tool has been designed by ASNU for the safe removal of tight fitting or inaccessible GDI injectors. This tool will be an essential, valuable and welcome addition to the tool range of any technician involved with the removal of GDI Injectors.

The GDI Injectors are built to a one micron tolerance; possibly the finest tolerance of any mechanical part on the engine.

Removing these injectors without the correct tool can possibly alter the seating of the pintle shaft of the injector, which can cause leaking or "sticking" problems for the valves pintle or it can even break the pintle ball off the end of the shaft. Any of these issues will render the injector as scrap and will require a new one. Hopefully the issue will be identified BEFORE it's fitted back in to the engine, where if not, it could cause untold damage to the engine's combustion chamber.

ASNU has tested and serviced more GDI injectors than anyone else in the world and have seen injectors damaged beyond recognition by "Technicians" struggling to remove GDI injectors without the correct tools. The kit in its basic format will safely grip all gasoline solenoid injectors in the grooves designed for extraction purposes.

Broken off connector plug (should look like the injector to the right) due to incorrect removal.

Damaged injectors from using vice grips/pry bar to remove injectors & damaging the outer casing

There is also an optional extra designed for extracting the BMW Piezo Injectors (ASNU 266BMW) As the injectors connecting pipe is offset, it is very easy for technicians to try and remove these injectors, pulling them out at the wrong angle and damaging them without the use of the ASNU tool.

ACCESSORIES & SPARES

ASNU Adjustable Injector Test Rail & ASNU GDI Fuel Rail Holder

The new ASNU I56A Adjustable Injector Test Rail has been designed to allow the ASNU user to quickly and easily install and test various different physical sized injectors without having to change the test rails they are mounted into.

Operation of the rail is very simple - by simply releasing the clamp levers, you can quickly release the injectors for easy removal and install. Once the injectors are in place, just turn the levers to secure their position.

This will really help reduce the time to test a set of injectors!

Part Number: ASNU I56A

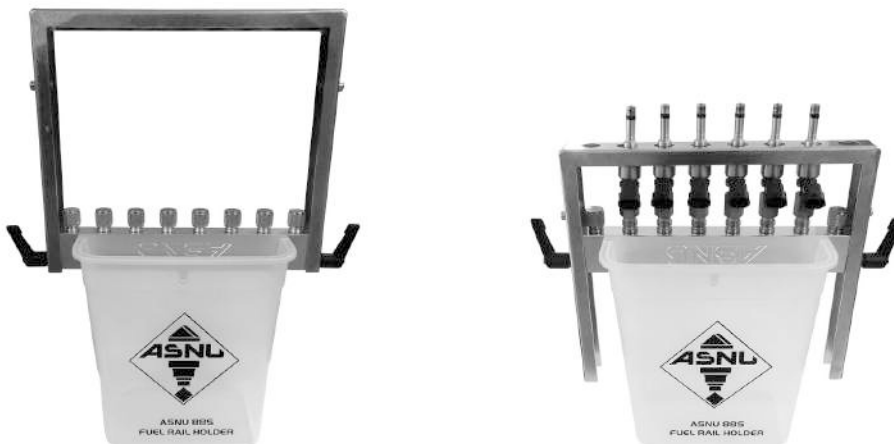

ACCESSORIES & SPARES

ASNU GDI Fuel Rail Holder

The new fuel rail holder is deep enough to allow the adjustable securing frame to go down to very small injectors (such as Pico) when installing or removing them. The fuel rail holder makes it easy to work whilst installing and removing injectors, whilst at the same time capturing the residual fuel that is released from the rail when the injectors are removed, which can then be returned to the fuel tank reservoir.

The fuel rail holder can also be used as a waste receptacle when flushing the injectors before re-testing them, ensuring that the water based ultrasonic fluid (that may still be inside the injectors after ultrasonic cleaning) is removed and disposed of so as not to contaminate the oil-based test fluid in the machine.

The GDI Fuel Rail Holder (Part No ASNU 885) is included when you order ASNU I56A Adjustable Injector Test Rail

ACCESSORIES & SPARES

ASNU REMOTE CONTROL SOFTWARE & Optional Variable Voltage add-on box

Introducing the ASNU Remote Control Software

The Remote Control software is designed to work alongside the ASNU Classic GDI. The Asnu Classic GDI machine is pre-programmed with a limited set of injector testing settings, so running the ASNU Remote Control Software with the machine will allow you to take more control when testing and servicing your injectors and replicate behaviour much closer to on-vehicle performance.

Part Numbers:

ASNU Remote Control Software: **ASNU Remote**
ASNU Variable Voltage add-on box: **ASNU 630***

*Followed by UK, EU, USA or AUS depending on power plug requirement

ACCESSORIES & SPARES

Features of the ASNU Remote Control Software

Full control of injector parameters including the following:

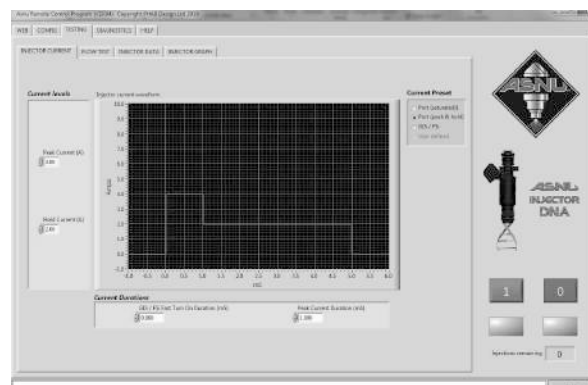

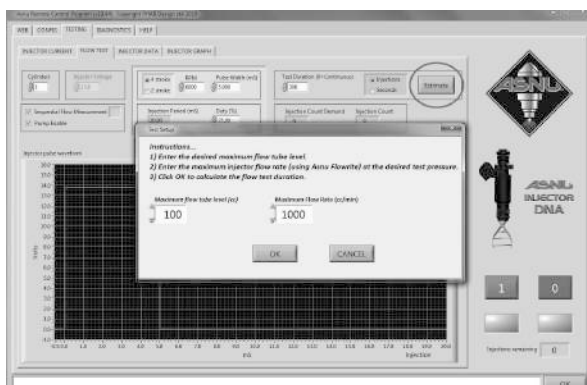

- * Fast Turn On Time (GDI/FSI)
- * Engine Speed
- * Peak Current
- * Pulse Width
- * Hold Current
- * Duty
- * Flow Test Duration (injections or seconds)
- * 4 or 2 Stroke selection
- * Injector Voltage (Optional extra in conjunction with the Variable Voltage USB controlled power supply box. Range 0V - 18V)

Other features include:

- * Ability to automatically estimate the flow test duration that will be required to fill the flow tubes
- * Graphical representation of the injector Offset / Dead-time
- * The ability to generate the Offset / Deadtime data for any injector at different voltages and pressures
- * Ability to match sets of injectors
- * Automatic conversion of flow values from volume in (cc) to flow rate (cc/min and lbs/hour)
- * Flow results and test settings can be saved, viewed and printed (Excel or Excel file compatible reader required)
- * Automatic conversion of flow values from Asnu FlowRite liquid to Vehicle fuel including user adjustment for different fuels
- * Graphical representation of the injector current demand
- * Graphical representation of the injector Pulse Width and Duty
- * Built in User manual and instruction links
- * Ability to save configuration settings
- * Free 10 day trial available

System Requirements:

- ASNU Classic GDI
- Windows 7, 8 or 10 (32 and 64 bit supported)
- PC/Laptop with USB port (2 x USB ports required if you order the optional Variable Voltage Box)
- ASNU Classic GDI Firmware version 19.04 or later is required to make use of all the program features
- ASNU Classic GDI with Serial number 423900 or newer otherwise ASNU 631 Upgrade Kit with board is required
